Halli Hallo [#OSINT](#)

so far just paranoid speculation of a crazy person:

- Stuxnet is still being updated
- Stuxnet is updated with 0days for DBS implants
- Stuxnet jumps from DBS to DBS
- Stuxnet contains Death lists of GUID's / TID's (Terminal ID's)

=> there would be some sort of command and control infrastructure
=> it seems to have some IDS or defense system with content / archetypes from my live (from ABB CHFAC) that then intimidates me with bomb terror or they just say that
=> someone would have to add people like me that were somehow gifted in computer things by the age of 14, maybe they add all autistic people?
---> so it would be with personalized data, personalized data from eg 1BN People would maybe not fit in the Memory, so likely that this thing has some sort of uplink OR really FAT compression that contains eg. Voice FingerPrints of all(?) people i know, or something like FFT-Voice-Archetype-Fingerprint-Database, if this variant: how many archetypes and how many Bytes parameters for one Archetype...
=> so the NAZI's eg. in Germany would just fill this lists that are then added to this sort of [#STUXNET](#), and that they call themselves [#Nazi's](#) is maybe just to obfuscate a bigger Player like NSA - National Security Agency
or the Chinese or the Russians ...
=> and YES it seems to have an additional "feature" so that if you go shopping (even if you only would like to by some clean water) that then tons of annoying Zombie-NPC's hunt you (Vector-Algebra paired with eg. deep learning algorithms or even simpler they mark me as mobile "point of interest")
