Guten Tag

@ Gleichaltrige & Jüngere: Holla...

Achtung wenn's stimmt wird Satan darauf "Diverses Unheil" in der "Unsichtbaren Universität" aktivieren um Terry Pratchett zu zitieren...

EgoState::KindICH:

ich will kein doofer Cybermen (Doctor Who) und auch kein Universal Soldier (Film;1992) werden... ähm ich geh dann besser mal meinen AutistenHelm holen nach so einem Mail...

We should counter act Satans AstroTurfing with some real grassroot movements:

Idee [1]:

mal eine Entwicklungspsychologin wie die Julia Noethiger
oder die Hoaxilla Podcast

Mistress mit einer gut aussehenden Physik, Mathe-, was auch immer- ETH Zürich
Professorin Tensor Heckse Level 13000 in eine Gummi Zelle sperren bis sie das Problem
gelöst haben... (Spass, das mit der Gummizelle und dem Zwang, bei mir Zwang=Rage, wäre
z.B. eine Dimension dieses GeekRescueCodes)

The screenshot shows a YouTube video player with the title "Legacy Code: Correctness". The video content displays a list of code quality metrics for C++ and C. The metrics are as follows:

- C++ We have a correctness proof and you can understand/verify it
- C++ We have a correctness proof
- C+ No open bugs, 100% test coverage and we do regular code audits
- C We try to fix bugs that our users tell us about
- C- We have a bug backlog
- C-- At some point we are planning to have a bug tracking system

On the right side of the video player, there are three video recommendations:

About this article

Abstract

'Brainjacking' refers to the exercise of unauthorized control of another's electronic brain implant. Whilst the possibility of hacking a Brain-Computer Interface (BCI) has already been proven in both experimental and real-life settings, there is reason to believe that it will soon be possible to interfere with the software settings of the Implanted Pulse Generators (IPGs) that play a central role in Deep Brain Stimulation (DBS) systems. Whilst brainjacking raises ethical concerns pertaining to privacy and physical or psychological harm, we claim that the possibility of brainjacking DBS raises particularly profound concerns about individual autonomy, since the possibility of hacking such devices raises the prospect of third parties exerting influence over the neural circuits underpinning the subject's cognitive, emotional and motivational states. However, although it seems natural to assume that brainjacking represents a profound threat to individual autonomy, we suggest that the implications of brainjacking for individual autonomy are complicated by the fact that technologies targeted by brainjacking often serve to enhance certain aspects of the user's autonomy. The difficulty of ascertaining the implications of brainjacking DBS for individual autonomy is exacerbated by the varied understandings of autonomy in the
